I support petition RM-11361, its only right the wireless airwaves should be open for more competition and innovation to put an end to the monopoly that major companies have right now over communication. FCC you need to act now to put a stop to all this going on, as it violates common laws of the land, big media has too much control over television, radio, internet and newspapers. We need more variety and competition to allow the free flow of information, as little by little most of our freedoms are been taken away and controlled by a hand full of special interest companies that only worry about how to make more money, put a stop to this and allow the free flow of information as it was indented for all.
